

**TEXAS BIOMEDICAL
RESEARCH INSTITUTE**
HEALTH STARTS WITH SCIENCE

Science that Delivers.

Today's Discoveries, Tomorrow's Cures...

You want to make an impact, touch lives and make the world a better place. Joined by like-minded supporters, your contribution to Texas Biomedical Research Institute helps speed life-saving discoveries and create lasting health and well-being for families around the globe.

Texas Biomed is the **ONLY** independent, not-for-profit infectious disease research facility in the world to combine high containment laboratories and an ethically-operated national nonhuman primate research center in order to move with speed and efficiency.

Texas Biomed partners with hundreds of researchers and institutions around the globe, advancing the fight against infectious diseases impacting communities worldwide – AIDS, TB, hepatitis, malaria, hemorrhagic fever viruses, parasitic infections and more. Our scientists also study comorbidities of infection such as heart disease and metabolic disorders, along with vulnerable populations, including the very young and the elderly.

Make a Lasting Global Impact

Texas Biomed's mission and research currently support nearly half of the World Health Organization's sustainable development goals from "ensuring healthy lives and promoting well-being for all at all ages" to "making cities and human settlements inclusive, safe, resilient and sustainable." Our mission starts in Texas but impacts the world.

Early in the COVID-19 pandemic, the Institute played a significant role in therapies and vaccines (i.e., Regeneron and Pfizer) being used today and continues with that research. Because of the support of many, we can endure to fight this and future pandemics. If you want to make a long-lasting impact with your gift, please join with those who support Texas Biomedical Research Institute. Help turn scientific curiosity into breakthrough cures.

Learn more about how you can support Texas Biomed to excel as a center for scientific research. **It is because of you we are able to provide science that inspires, science that delivers and science that heals.**
