IN-TRAC Events

October 2023

all times Central

BBC: Inactivation Protocol Development

Wednesday, October 11th, 12-1pm

Inactivation is to render pathogen non-viable, nucleic-acid non-infectious, toxin non-toxic while retaining characteristic(s) of interest to accommodate the intended future use(s) of the material.

- How to choose an effective inactivation method which also fulfills specific research needs
- Factors to consider when designing an inactivation validation procedure
- Risk assessment and the need for subsequent process verification
